

Encrypted Documents

Protecting Email Delivery of Sensitive Documents

Phishing attacks are on the rise, so asking your customer to pick up their secure documents using an embedded link back to your web site does not appeal to many customers.

OneWorld Encrypted Documents enables your organization to email mass volumes of confidential statements and documents directly to your customers' inbox in the form of an encrypted PDF. Your customers can view their documents on any device without leaving their email system. Messages are received within minutes – fully branded with the look, feel and functionality that corresponds to your company – while keeping data confidential at all times.

Features:

- Multi-Channel delivery formats: standard s/MIME, Secured Reader message, encrypted attachments, or web portal pickup
- Encrypted attachment in PDF, ZIP, or mixed delivery. Accordingly, non-PDF files can be delivered as attachments within encrypted PDF or encrypted ZIP files
- Pre-Shared key management console, self-care web portal and web service API for easy system integration
- Push features, rather than pull
- Standards-based PKI, X 509 certificates
- Fast and efficient encryption engine for high volume document processing
- Delivery of documents is instantaneous, no waiting
- Incorporate customized marketing messages & offers
- Works with your existing portal if you have one

Benefits

- Happy customers: Improved user experience.
- Compliance: Encrypting confidential data helps you conform to privacy legislation.
- Low cost: A guaranteed and secure delivery mechanism without the cost of paper and postage.
- Easy solution: An easy way to process and encrypt large volumes of documents.
- Guaranteed secure delivery: Electronic statements confidentially delivered directly to your customers' inbox.
- Scalable solution: Effortlessly grow from 10,000 to one million statements; solution will grow with you.

Encrypted Documents

Inbox delivery of bills, documents is what customers prefer

Scalability

The ability to scale efficiently and on-demand by deploying higher density configurations within your existing footprint impacts not only your solutions' Return on Investment (ROI), but also your company's bottom line.

Security & Data Protection

Comprehensive security, beyond the human guard, ensuring your information is protected at all times. Biometric security, card readers, keypad or electronic locks as well as digital camera placement are part of the service.

System Components

Statement Production: Encrypted statements are generated by the billing engine within the customer environment. Typically they are printable PDF files that include customer invoice or transaction information that are confidential and sensitive.

Document Processing

The document processor receives the statements in batches and forwards them to the encryption engine for further processing, and also provides process management and reporting.

The Echoworx Advantage

100% Encryption Focused

OneWorld encryption, is the first smart message encryption platform—designed to adapt to any environment. With over 1+ million users and 5000 deployments in 30 countries.

Agile. Responsive. Passionate.

Our passionate encryption experts take the complexity out of encryption for world leading enterprises.

Trusted Root Certificate Authority

Echoworx is a WebTrust audited Certificate Authority (CA) trusted by the Apple and Microsoft CA Programs offering multiple, SSAE 16 SOC2 Type II certified secure, independently operated data centres in the US, Canada, and Europe.

World Class PKI

Our world class PKI Infrastructure offers IT administrators full certificate and key management (backup, expiry, escrow, revocation and rollover).
