

Email Encryption Platform

Designed to adapt to your environment

The OneWorld Encryption platform is a policy-based encryption solution that provides you with an easy way to encrypt your organization's email. OneWorld ensures protection without changing the way your employees, customers, and business partners send and receive emails.

The solution enables your IT administrators to easily define and enable email policies to safeguard against information loss. OneWorld's reporting also facilitates regulatory compliance using an intuitive, easy-to-navigate, web-based management console.

Features:

- Fully managed Cloud, On Premise, and Hybrid solutions
- Supports industry standards based encryption (PKI, x.509, S/MIME technology)
- Policy-based message routing and encryption management, from a simple to use web-based interface, enforces email encryption based on pre-defined policies
- Six flexible encrypted message delivery methods: TLS, S/MIME, PGP, Encrypted ZIP, Web Portal, and Encrypted PDF for complete compatibility
- Content-aware encryption filters that scan SMTP headers, subject, body, and attachments
- Detailed real-time reporting (bounce backs, tracking, device type open, email opened, viewed for how long, forwarded, recalled) enabling IT to audit usage and make changes
- Key and Certificate management (backup, expiry, escrow, revocation and rollover)
- Multiple signing modes provide a seamless experience when using digital signatures for compliance purposes
- Single Sign On (SSO) support for seamless integration between your secure website and our web pick-up portal
- Optimized for smartphones and tablets (iOS, Android, Blackberry)
- Intelligent one-click encryption auto selects best method encryption based on a per recipient basis
- Support for 21 languages including double-byte languages like Chinese and Japanese

Benefits

- Puts control back in the hands of your IT with a turn-on and manage service; using a simple point-n-click interface with no need for hardware or software upgrades.
- Applies your company's encryption policies automatically and transparently.
- Protect your organization against liabilities associated with Health Insurance Portability and Accountability Act (HIPAA), Gramm-Leach-Bliley Act (GLBA), PCI Compliance, Securities and Exchange Commission (SEC) rules and more.
- Flexible platform helps meet your organization's specific requirements, as well as streamlines your workflow processes.
- With message receipts and notifications, you can be assured that sensitive emails are being sent securely along with compliance-driven reporting.
- Easily integrates with a host of solutions including Office 365, whether you're working on desktop or Outlook on the web.

Email Encryption Platform

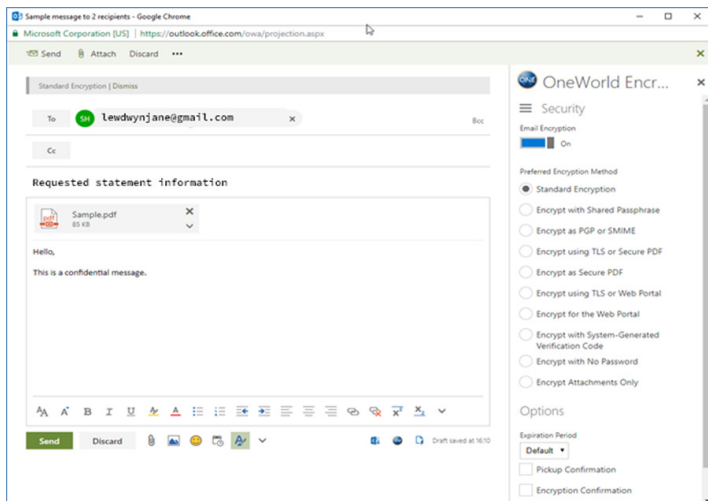

Easy to Deploy. Simple to Manage. Friendly to Use.

The web-based management console helps organizations define email policies. If triggered, messages are automatically encrypted and sent using one of six delivery methods best suited for the recipient. Along with policy-based encryption, OneWorld Encryption with Office 365 Outlook on the web integration provides additional functionality that enables users to select different encryption methods - empowering consumers to be in control of their security preferences.

Complexities of key management are also removed. Organizations do not need to deploy expensive PGP or X.509 Certificate Authorities. It's all done for them in the Cloud, drastically reducing the cost of their PKI implementation. In addition to encrypting messages, you can monitor all messages and reject those that do not comply with company policies and procedures. OneWorld analytics track every message that has been processed and provides a snapshot of the system using summary diagrams. Detailed, indexed reports identify important information such as the most flagged policies, top offenders, bounces, open statistics, and messages forwarded or recalled.

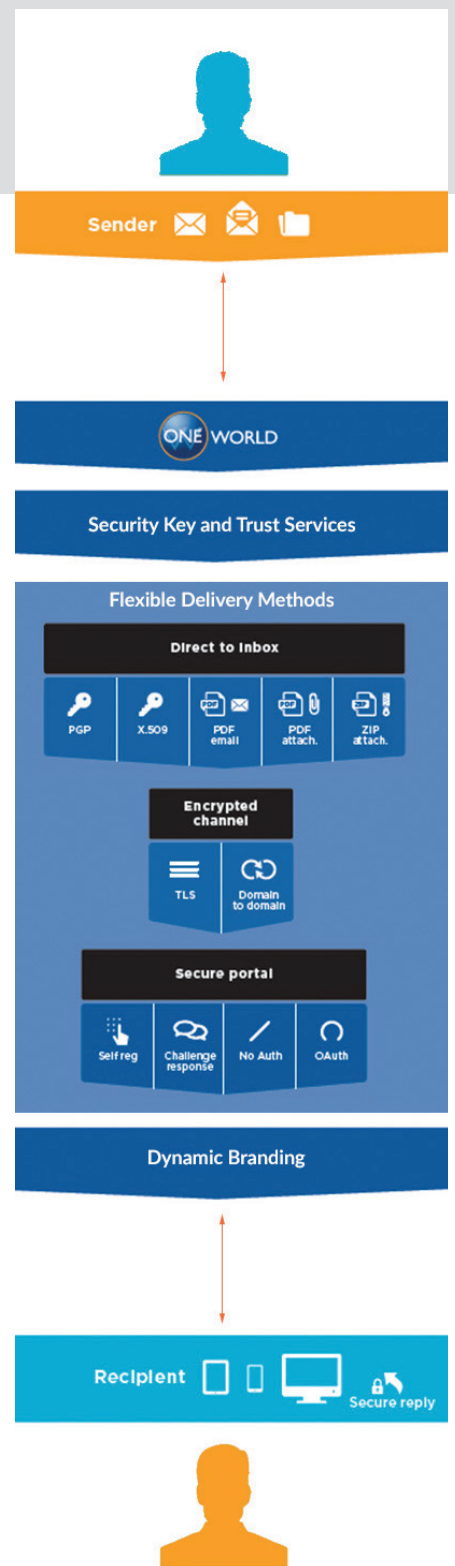

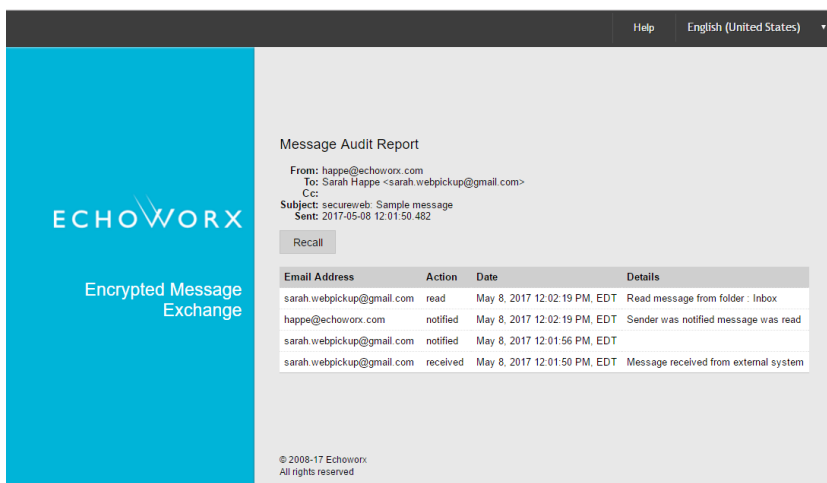

OneWorld Add-in for Office 365 Outlook on the Web

Integrating into Office 365 allows senders to "Encrypt" from anywhere!

OneWorld Message Audit Reports

Delivery flexibility offers message audit and recall for senders and administrators!
